

PAPER COMPACTOR

main features

- Compaction up to 75%
- Bale weighs only 35-45lbs/20 kilo
- Air operated 1900lb/865 kilo ram
- Completely mobile and manageable

The Paper Compactor is compact in itself and will occupy only a small area of your workshop. The cabinet is 2.5mm thick and has a low centre of gravity, with the entire front opening for easy unloading. The bales tie-off in seconds. Keeps your shop neat and tidy.

Volume of masking paper and plastic can be reduced by 75% resulting in fewer trips per day to your refuse container. The Paper Compactor can handle the masking paper from as many as 50 cars before needing to be unloaded. Most waste material is hauled and charged by volume, with masking paper and plastic making up a large portion of the volume of your rubbish. By using our Paper Compactor you could reduce the number of times your waste skip is emptied, resulting in overall lower yearly costs for skip emptying. The Paper Compactor makes sense for the workshop and the environment.

Do your part - recycle
